Deutsche Boerse and TNS Unite in Strategic Boost to Eurex and Xetra Platforms

**Business Challenge**

Transaction Networks Services (TNS) has added Eurex and Xetra to its financial community of interest to help Deutsche Boerse expand the reach of its key European markets. Firms wanting to be close to the trade matching and data engines for Eurex and Xetra need expertise to relieve the headache of sourcing, establishing, maintaining and managing remote data center space and market access while providing ultra-low latency for both trading connections and accessing market data feeds.

**Solution**

Firms can now use TNS' proximity Managed Hosting, Co-location and Connectivity Service, which is available at Frankfurt’s FR2 data center, among other strategic locales, to access the strategically important Eurex market and Xetra electronic trading system.

TNS, which provides access to more than 300 market feeds from over 55 stock exchanges and electronic connectivity networks, has a 2,100 endpoint strong financial extranet. Its connectivity, managed hosting and co-location services are used by over 700 financial institutions globally who will now be able to quickly establish new connections with Eurex and Xetra.

TNS’ Secure Trading Extranet provides one-to-many connectivity to a diverse global community. Members enjoy cost efficiency, reliability and high availability, which is reinforced by detailed service level agreements and supported by over 125 points-of-presence.

**Outcome**

Oliver Grohmann, Head of Market Readiness (for Trading, Clearing and Cash Market) at Deutsche Boerse, said:

“Adding TNS to our roster of connectivity providers will increase our appeal. TNS’ reputable and established position as a specialist financial connectivity provider is aligned with our objective to ensure traders can securely, reliably and cost-effectively trade with us. TNS is a trusted multi-member service provider and firms that are resource or budget constrained will be able to work with TNS to simplify their connectivity and deploy their business more efficiently.”
Why Choose TNS’ Managed Hosting, Co-Location and Connectivity Service?

Managing remote data services is a challenging activity. Securing and managing headcount, servers, facilities, budget, and expertise is costly, time consuming and diverts attention away from trading activity. TNS’ Managed Hosting, Co-Location and Connectivity Service allows you to focus on your business whilst secure in the knowledge that your remote data center services are being managed by an established service provider with a renowned reputation within the trading community.
