

# Exegy and TNS Partner to Offer a Global FX Trading Platform

## Business Challenge

With evolving global regulation, increased market fragmentation, and the complexity and costs of building, maintaining, and managing an FX trading infrastructure, Exegy and Transaction Network Services (TNS) are aligned with a common goal to provide a comprehensive, cost-effective electronic FX trading solution.

## Solution

The new offering combines TNS' excellence in market connectivity and hosting solutions with Exegy's Trade Port FX which delivers normalized FX market data and execution services to major FX venues as a fully managed and integrated FX trading platform.

The new partnership will include redundant, hardware-accelerated computing Exegy appliances installed in the main co-location centers globally, which will allow Exegy Trade Port FX to deliver single-digit, microsecond normalized FX market data from 44 live venues and order execution through a unified, FX-specific API. TNS will host these appliances and provide robust, reliable market connectivity to offer firms the flexibility to scale operations.

Traders who sign up to the new global FX trading platform will also be able to establish connections with TNS' extensive financial community of interest which now counts more than 2,100 endpoints globally.

## Outcome

**Carlos Lopez Lansdowne, Exegy Sales Director in Europe and Asia, said:**

*“Exegy is excited to be working with TNS to create a global, state-of-the-art FX trading platform. TNS’ global presence, renowned reputation for superior customer service, coupled with Exegy’s FX market data and order execution solutions will deliver better performance, lower total cost, and a disruptive new model in the FX industry.”*

# Why Choose TNS' Secure Trading Extranet?

Transaction Network Services (TNS) is focused on providing buy and sell-side companies with flexible, robust and secure electronic trading solutions. Our Secure Trading Extranet is the first choice for many of the worlds' financial institutions. Commercial banks, hedge funds, mutual funds, pension funds, broker dealers, and securities and commodities exchanges use us because:

- **We offer a high quality service** – as well as priding ourselves on our state-of-the-art technology, we also bring customer service and client relationships to the forefront of what we offer. With TNS our clients are not just another connection, we work with them to ensure they get everything they need from electronic trading to meet the heavy demands of the financial market.
- **The reliability of our service** – all points of presence are fully redundant and there is no single point of failure across the network. Client connections are maintained with back-up capabilities, leaving our customers with complete peace of mind.
- **Our service is secure** - billions of transactions are transported over the TNS network every year. Millions of records are exchanged daily about payments, customer details, stock figures and pricing information, all carried securely on our privately managed network.
- **Connection speed** – financial institutions are all looking for agility and responsiveness from their vendor. Our independence and flexibility enables us to have trading connections up and running in three days or less.
- **Extranet community** – our IP network services allow customers to access multiple financial services through a single network connection, thereby eliminating the need for multiple, costly, institution-to-institution leased line connections. This gives quick and easy access to a variety of different Exchanges, Market Data Vendors and Trading Applications, Multi Asset Classes including FIX.
- **Low latency network** – traders need mission critical data. TNS' Secure Trading Extranet has been designed and is managed to ensure the highest levels of throughput to support Direct Market Access, Algorithmic Trading and Market Data Distribution.
