

Travelex Expands ATM Acceptance to Major Global Payment Schemes

Business Challenge

Travelex, a Finablr company and a market leading independent foreign exchange specialist, operates ATMs in 12 countries across Europe and Asia Pacific regions, including the UK, France, Netherlands, Australia and Hong Kong. It wanted to expand the card schemes available across its 1,050-strong ATM network.

Solution

The company will use TNS' managed hosting service to maintain its Switch transactions and will now accept JCB, Discover, DCC, and UnionPay cards.

TNS' hosted managed service will support ATM transactions for local and foreign currencies as well as dynamic currency conversion. Prior to this new agreement, Travelex used an in-house service to handle transactions, combined with TNSLink ATM communications for ATM solutions.

Outcome

Dan Gilby, Global Head of Acquiring at Travelex, said:

"With a rich history in foreign currency, our business has always focused on ensuring consumers have access to the travel money they need. The promises of fintech market entrants have transformed the market as we knew it, but cash still remains at the center of payments and travel money even as consumers increasingly look for a wider range of options."

"Thanks to our long-standing relationship with TNS, we're thrilled to be making this latest strategic enhancement to our ATM business, expanding our services to a greater number of credit card brands."

Why Choose TNS?

Global

With just one connection, TNS can securely link your business to more than 400 companies in the global payments marketplace helping you accelerate growth, drive revenue and manage risk, while creating operational efficiencies and reducing costs.

Secure

TNS payment connectivity services are secure, achieving PCI DSS Level 1 certification and an "Advanced" BITSIGHT security rating.

Reliable

Diverse, geographically redundant data centers are equipped with the latest technologies to ensure no single point of network failure.

Flexible

Easily scale your business, connecting a wide variety of communications protocols, acceptance devices and new payment innovations.

Cost-Effective

TNS simplifies complex infrastructure investment and management for its customers. There's no CAPEX for new connections or hardware refreshes once connected to the TNS network, plus PCI DSS compliance burden is reduced.
