

TNS Live in Euronext's Bergamo Data Center

Euronext has migrated its primary data center and re-located its colocation services to the Aruba Global Data Center IT3 in Bergamo with TNS one of the first managed services providers to go live in the new facility.

The Strategic Imperative

“ Provide traders with uninterrupted, seamless trading from day one of the switch over ”

Tom Lazenga, General Manager, TNS Financial Markets

As with TNS' other global colocation sites, TNS is leveraging its Layer 1 switching solution to deliver ultra-low latency mutualized market access while also deploying the lowest latency network connectivity.

TNS' Layer 1 solution enables firms to access execution speeds that are up to 10-times faster than traditional layer 3 architectures.

Providing Choice

TNS offers multiple connectivity options including space within the Bergamo colocation facility as well as connectivity from outside.

Trading firms can rely on TNS for the procurement, installation and management of their trading infrastructure, including:

Differentiated services to help all traders

From small firms requiring a partial rack...

...to international banks requiring multiple contiguous cabinets

Why Choose TNS?

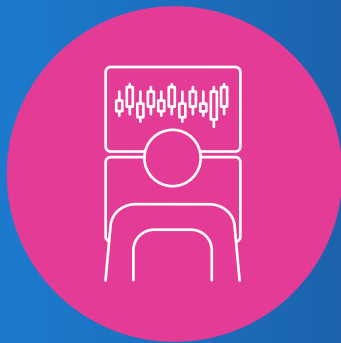

Specifically designed and engineered solutions to address the needs of financial market participants worldwide

Enjoy lower total cost of ownership, thanks to cost efficiencies and rack-optimized cabling and design

TNS Layer 1 was the first of its kind and delivers connectivity in as little as 5 to 85 nanoseconds

TNS employs experienced, dedicated in-country teams with local knowledge

All customers receive 24x7x365 support and monitoring via TNS' Network Operations Centers in the US, UK, Australia and Malaysia
