

The Benefits of TNS' Managed Services

Some businesses approach network communications solutions and payments data security services as two separate technologies, but bundling them together provides significant cost and performance benefits.

More than other managed services choices, TNS' portfolio of managed services provides advantages that go beyond the ordinary.

Extensive Global Connectivity

TNS delivers its managed services through a private payments cloud that enables any payment device or online gateway to connect, anywhere in the world.

As a managed service provider TNS connects into more than 400 payment processors, acquirers, banks and alternative payment schemes globally

TNS enables secure and compliant connectivity from a range of network edge points, wired and wireless, with a suite of products including:

TNSConnect

Secure, fully managed resilient connectivity for high volume transmission of credit, debit, charge and fuel card payments to the TNS network.

TNSLink

A highly secure, reliable and cost-effective end-to-end network solution connecting POS, ATMs, kiosks, retail in-store applications, or any other remote payment devices to the payments community.

TNS Secure SD-WAN

A PCI-compliant, highly secure, software-defined, wide-area network solution for merchants, banks and acquirers with payments as a mission-critical function.

Global Wireless Access

A wireless m2m solution for POS terminals, routers and kiosks that combines comprehensive international coverage with in-country domestic roaming to minimize blackspots.

TNSPay Mobile

A reliable, secure, low cost and turnkey wireless POS connectivity solution for ISOs, processors and acquirers.

TNSPay Protect

A suite of transaction security solutions including PCI-validated Point-to-Point Encryption (P2PE), managed POS Encryption and Tokenization.

Focused on Data Security

TNS' managed services integrate communications infrastructure and enhanced data security measures. PCI DSS compliance is easy because TNS' infrastructure is out of the merchant's PCI scope.

TNS is a level 1 PCI DSS certified service provider

Protects cardholder data with Point-to-Point Encryption (P2PE) and tokenization

Monitors every input, output and message across our network 24/7/365

TNS' Managed Services Deliver Cost-Savings

The TNS team works closely with businesses to find and customize the products that best fit their budget.

Provides economies of scale

Bundling services delivers pricing flexibility and maximizes savings

Telecommunications carrier agnostic, so TNS can provide the best, unbiased solutions

Fully Engineered Network Resiliency and Support

From a full suite of services, global network connectivity and high-touch service, TNS provides it all under one roof.

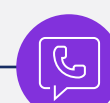

Comprehensive router and switch management

Reporting, monitoring and service availability management

Use of multiple carriers diversifies customer risk and maintains geographic redundancy

One-call 24-hour/7-days-a-week technical support and remote device configuration

The Benefits of Bundling with TNS: A Richer Overall Offering

Any business that needs reliable connectivity plus secure, compliant payments transactions should leverage a bundle of TNS managed services. Only TNS provides best-in-breed data security, the potential for significant cost savings, and unmatched high-touch service and support.
