Introducing TNS Cloud Server Management

TNS Cloud Server Management is a new solution designed for high-performance exchange trading utilizing TNS' bare metal servers and ultra-low latency trading connectivity. TNS Cloud Server Management combines the company's Dedicated Server hosting capabilities with hands-on server management to help customers more easily embrace their cloud strategy. This infographic explores the benefits this solution offers financial market participants.

A Complete and Feature Rich Management Solution

By integrating infrastructure procurement, deployment, configuration and management, TNS Cloud Server Management helps customers simplify operations and rapidly increase their go-to-market opportunities.
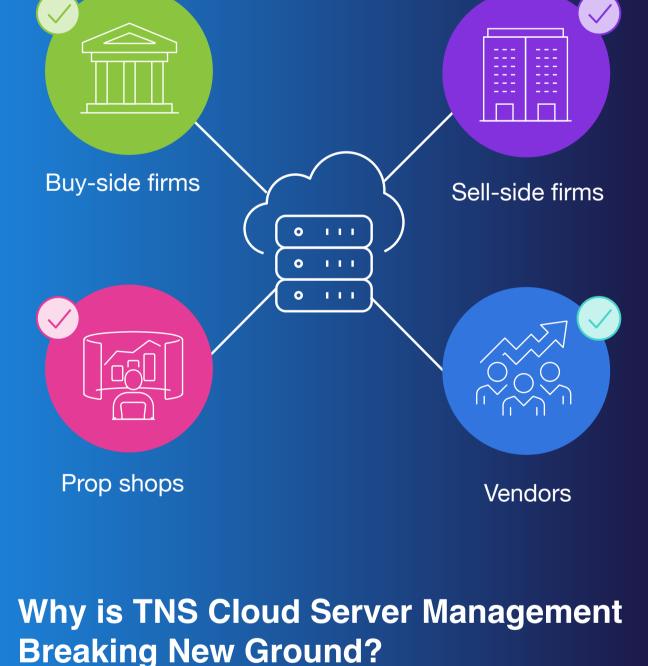

Built on TNS' global connectivity backbone, TNS Cloud Server Management moves up the stack to provide clients with a single-source suite of custom services, including:

- Installation and configuration
- Configuration of PTP timestamping services
- Patching
- Access management
- Back up and restore
- Server load and component monitoring/troubleshooting
- Network card and network address configuration

Operating System

This end-to-end offering dramatically reduces clients' trading center complexity and costs, allowing firms to focus their human resources on mission-critical business goals and go-to-market opportunities.

Who can Benefit?

- Buy-side firms
- Sell-side firms
- Prop shops
- Vendors

Why is TNS Cloud Server Management Breaking New Ground?

Up until now, trading organizations have typically had to manage their own server resources.

Trying to keep up with operating system updates are major pain points that increase costs and reduce time to market opportunities.

TNS is now reducing this complexity by providing both infrastructure and end-to-end server management.

With full systems management integration comes stability and security.

It also frees up client time to focus on their core business objectives and move faster towards increased trading profitability.
