

# TNS' smart multi-carrier SIM card for POS terminals

With traditional telco SIMs, processors must assemble and manage a **patchwork of telco SIMs to connect customers**. This fragmentation is:

This resulting **dropped connection can cause:**

**Decreased customer loyalty**

**Lower revenue**

**Increased calls to the help center**

Unlike standard IoT SIMs or SIM cards from mobile operators, TNS' multi-carrier SIM isn't tied to a single network. **Our smart multi-carrier SIM scans the available networks and automatically connects to the best-performing one.**

## Maximum uptime

Say goodbye to the coverage gaps of single-carrier SIM cards. With an always-on connection, your mission-critical payment devices achieve unmatched levels of uptime.

## Improved customer experience

No matter their location, your customers will enjoy dependable and convenient connectivity.

## Improved revenue

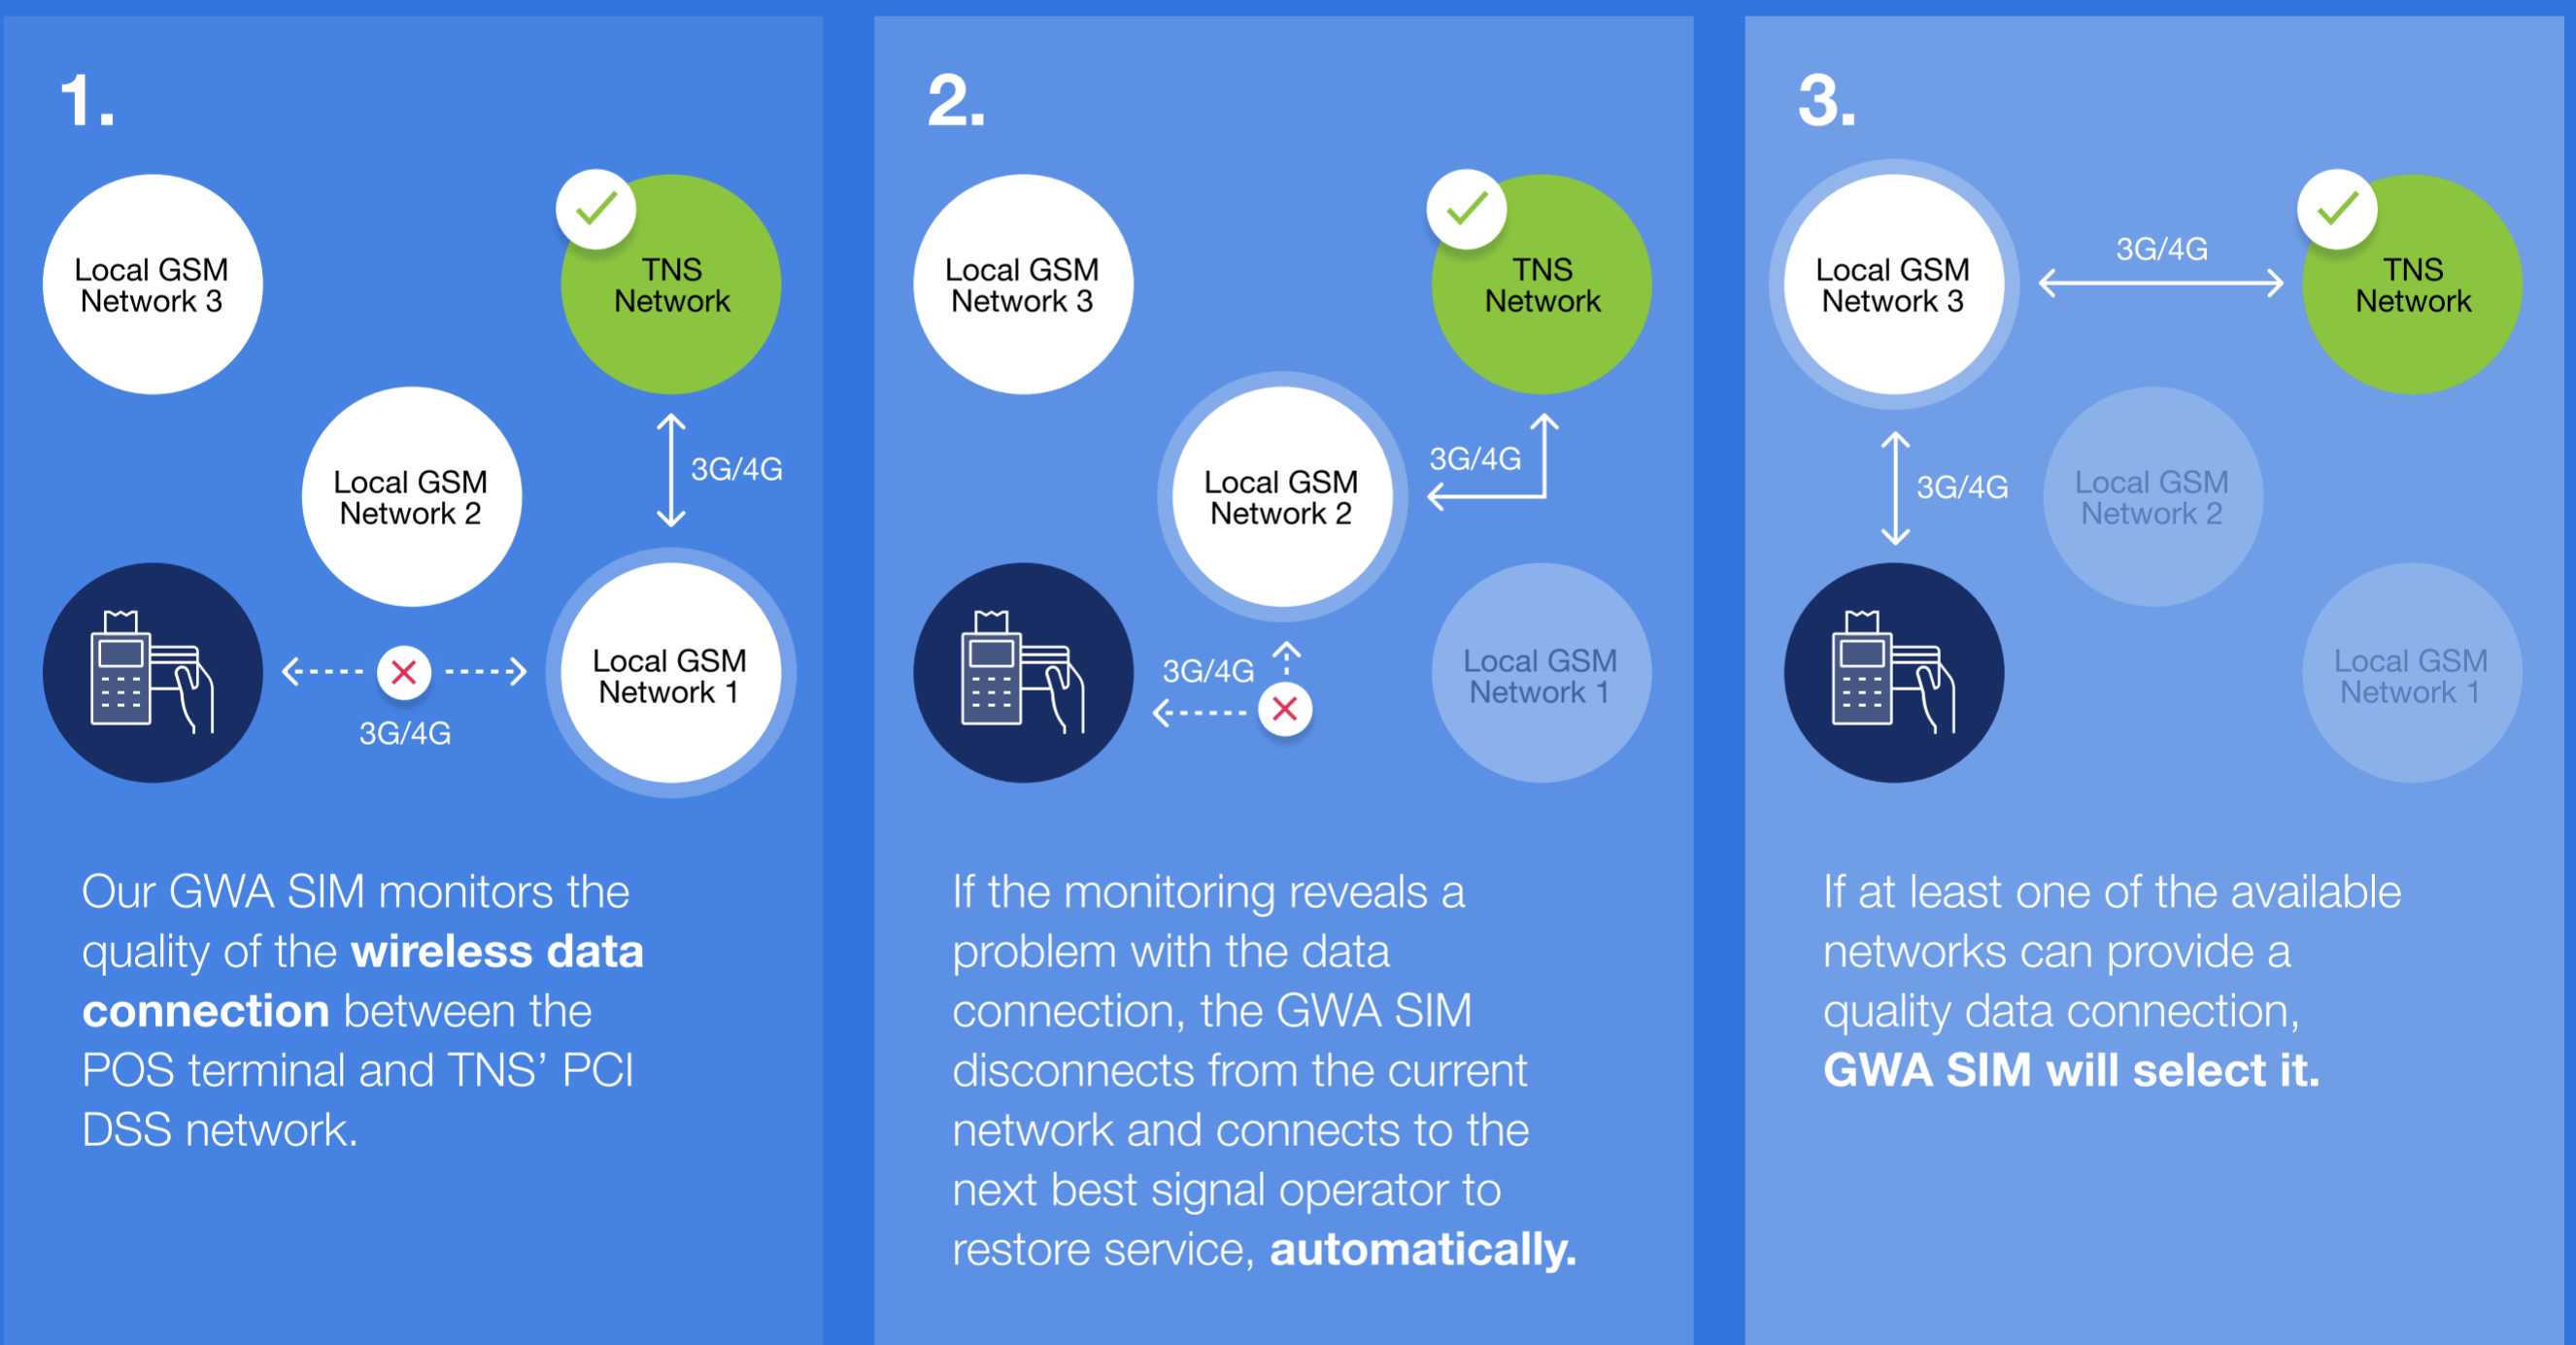

When your POS terminals experience more uptime, your customers can reliably process more transactions.

## Reduced support burden

Improved uptime means fewer calls to your help center to remedy issues.

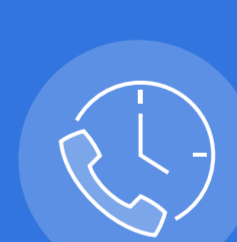

## Choose TNS for a full-service multi-carrier GWA SIM solution for POS terminals

**A fully managed**  
end-to-end solution

**Real-time insights**  
to aid decision making

**24/7 proactive monitoring**  
and real-time support

**PCI DSS certification**  
ensures secure transmission of your transactions to thousands of global end points

**Pre-activated SIMs**  
that are plug-and-play, so you can get started, faster

## TNS offers connectivity you can trust

For 30 years TNS Payments has focused exclusively on connectivity and payments infrastructure. We're trusted by the world's largest and leading acquiring banks and processors to handle their POS transaction traffic reliably and securely.
