

TNSLink for Retail

Connectivity engineered for ongoing resilience

Secure your critical retail operations with a robust, fully managed network solution. **TNSLink for Retail** sets the gold standard for cost-effective, resilient connectivity with automatic failover and security features included – so you can ensure your customers enjoy seamless experiences while you gain greater control and visibility into your network. Plus, get global 24/7 expert support, too.

TNSLink for Retail is a highly available, secure, fully managed solution that streamlines your operations while ensuring your stores, staff, customers, business applications and payment devices stay online and protected – while reducing your total costs.

We design, monitor and maintain your network so you can focus on your core business.

A single solution that reduces your total network and security costs

With our global managed service solution, we simplify the connectivity ecosystem, by replacing multiple vendors with a single trusted partner who takes on the responsibility of designing, delivering and maintaining the whole solution, including connectivity services, infrastructure, equipment and software licenses. We integrate connectivity (wired broadband or wireless), security and networking (such as switching, SD-WAN and Wi-Fi), all while also providing 24/7/365 monitoring, support and updates.

Trust your retail connectivity to the experts

Building a resilient network requires more than just technology. That's why our consultants design secure networking environments tailored for your business with automatic failover built in.

Whether you're launching new IoT devices, guest Wi-Fi or a new location, we make sure scaling your business is simple and secure and improve customer experiences.

Protect every store from outages and threats with secure connectivity.

TNS' managed service solution

Deliver exceptional retail experiences and leverage the latest network technologies with the advanced features that matter most to your store.

Monitored 24/7 and managed by tech experts with zero-touch provisioning, deployment and management of connectivity services, routers, SIM cards and software licenses.

Why work with TNS in retail

Secure connectivity

Secure all your data like payment data

With multi-layered security. With next generation firewall routers and our PCI DSS-certified service, we protect your payments and business applications from interruptions, malicious actors and other threats.

Highly available

Ensure your business stays connected, even in a network outage TNS' telco agnostic designs, highly available router configurations, core network and multi-carrier SIM cards make sure your mission-critical systems stay running.

Expert service

We understand your business

From our expert consultants to our deep network, security and payments experience, trust us to create a tailored network environment for your retail business.

Proactive monitoring

Free your IT teams up with total monitoring and management of your network operations.

Hands-on support

Get direct access to network engineers, 24/7/365.

Real-time visibility

Gain full visibility across your stores, devices and network performance in a single dashboard.

Single solution

Fully managed

Remove the risk of patchwork solutions and outages with a single, managed solution.

A single touchpoint

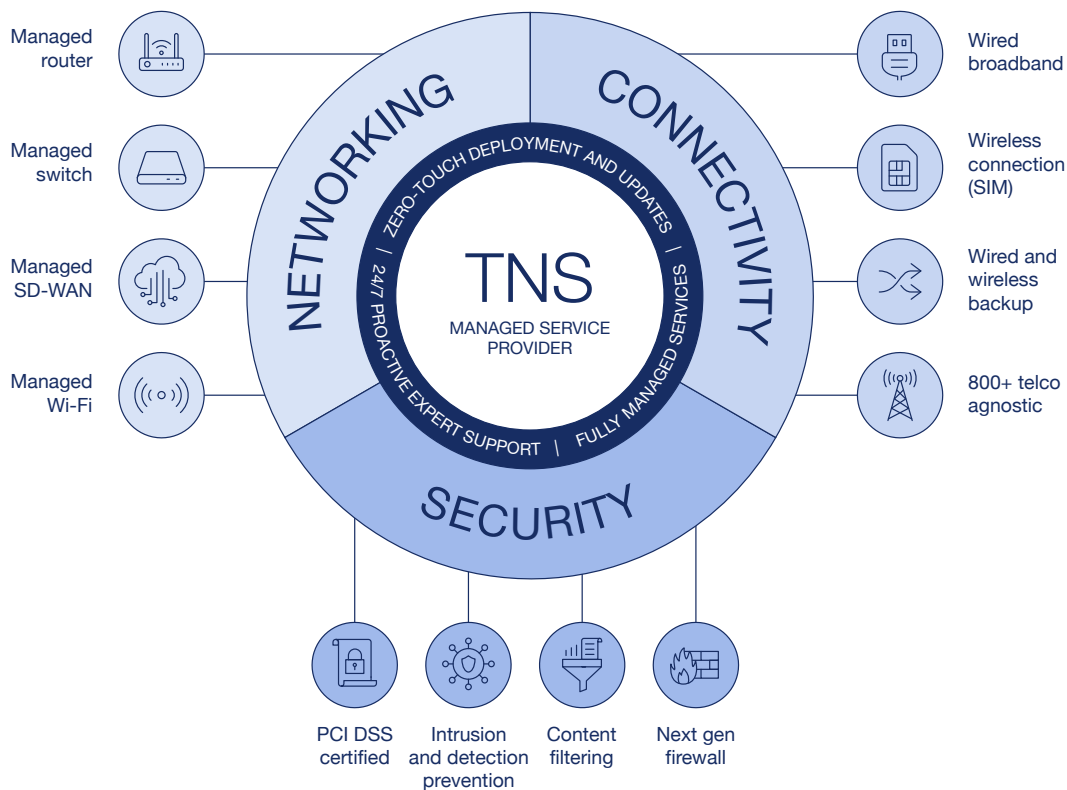

Reduce TCO and enjoy one contract and monthly fee – instead of juggling multiple vendors.

Zero touch

Easily expand to new markets with zero-touch provisioning, deployment and management of connectivity services, software licenses, SIM cards and routers.

Flexible

Easily upgrade or downgrade your data plans without additional fees with flexible packages.

Retail's first line of defense for connectivity
