

# Transform Your Voice Infrastructure with TNS Voice Transit +

With increasing regulatory requirements and aging legacy systems, providers require a modern voice solution that goes beyond basic functionality – offering scalability, security, and full compliance. TNS Voice Transit +, a comprehensive suite of fully managed services, could be the answer carriers, enterprises and service providers are looking for.

## Ensure Compliance and Emergency Readiness

The TNS Voice Transit + solution is designed to enhance connectivity and regulatory readiness while supporting dependable communication during critical moments.

### Abbreviated Dialing Codes

- Help reduce infrastructure costs while enabling accurate location-based routing
- Supports 211, 311, 511, 711, 811, and 988 services
- Supports S8HR for HPLMN use cases

### Emergency Services

- NG911-compliant routing
- Wireline and wireless coverage
- Built-in redundancy and geographic distribution
- Helps reduce 911-related infrastructure costs

## Foundational Voice Capabilities

TNS Voice Transit + offers a complete set of core voice services, ideal for carriers looking for reliable inbound and outbound voice capabilities coupled with scalable connectivity. These services include:

Outbound Dial

Inbound Dial

Transactions

Professional Services

Roaming Services

Connectivity

Managed Gateway

## Transition from TDM to IP with Confidence

TNS' UCaaS offers service providers transitioning from legacy infrastructure to IP-based environments simplified operations and support for scalable growth.

Includes Hosted PBX (HPBX) and SIP Trunking

Helps replace Class 4 and 5 voice platforms

Supports NECA and ILEC compliance

## Protect Your Brand and Your Customers

Through enterprise identity and trust solutions, businesses can improve engagement, deliver trusted voice interaction and enhance network protection.

### Enterprise Services

Helps strengthen brand trust and improve outbound call performance

### Call Authentication & Validation

Helps identify spoofed calls, support regulatory compliance, and enhance transparency across voice traffic

### Analytics

Helps protect networks and improve operational efficiency through intelligence insights

## Stop Unwanted Traffic

Built on TNS Call Guardian intelligence, TNS' robocall protection and network security solutions are engineered to protect subscribers and networks through proactive threat mitigation helping address fraud, phishing, and message pollution.

### Mobile App

Provides secure, app-based control over unwanted calls and messages

### Protection Services

Offers advanced security capabilities to combat robocalls and spoofing

As a single provider, TNS can handle all your voice routing needs, including STIR/SHAKEN, fraud protection, call authentication, E911, abbreviated dialing codes and more.
