

TNSPark Session

Say goodbye to coins and lines with session parking

Enable drivers to pay for on and off-street session parking with a simple, secure mobile app.

TNSPark Session is a mobile parking payment app that offers your customers a simplified parking experience while giving you greater control over your operations.

Available in your brand style, it offers flexible payment options, the ability to match your rate structures and reduces reliance on costly infrastructure.

TNSPark Session can be connected to your third-party BI and enforcement systems, providing you with valuable customer insights and driving a positive experience for your customers from start to finish.

How it works:

From on-street parking to a barrierless off-street lot

With TNSPark Session, drivers skip the machine and pay straight from your branded mobile app. They can:

Start and stop sessions as needed

Pay for fixed time parking

Select pre-set products like early-bird or all-day options

Extend sessions in-app, with automatic expiration reminders

It's a **faster, easier** way to park.

While customers get a smoother parking experience, you manage everything behind the scenes, from pricing and product setup to communications and compliance. Through the administration portal, you can:

- Set and update rates and parking products
- Track real-time usage and transactions
- Send push notifications to users
- Integrate with your existing systems

The benefits of TNSPark Session

Flexibility and functionality set TNSPark Session apart – providing a seamless experience for your customers and business insights for you

→ **Simpler payments**

No more cash handling, physical tickets or lines – customers pay by app, reducing the need for machines and lowering maintenance costs.

→ **More control**

Create and adjust rates, run promotions and send updates directly to users through built-in communication tools.

→ **Better customer experience**

In-app session extensions, flexible payment options and easy access to past transactions improve satisfaction and loyalty.

→ **Connected systems**

Integrate with your existing financial platforms for a more streamlined approach and link infringement and number plate recognition systems to simplify enforcement.

→ **Smarter operations**

Access real-time data on usage, revenue and customer behaviour through the administration portal. Integrate with enforcement systems using license plate and transaction data to manage infringements.
