

CLOUD

**Server management done right.
Powering your critical trading systems.**

Full management of the servers powering your mission critical trading systems.

Expertise is required to configure and deploy operating systems, tune servers to ensure optimal performance, and perform ongoing troubleshooting and maintenance. Waypoint has extensive experience

managing systems at some of the industry's most demanding firms. We can deploy, configure and manage your servers, helping to reduce cost and complexity while allowing you to focus on your core business.

Operating system installation and configuration

Server hardware and OS health monitoring

User access management

Security updates

Network card and address configuration

System Managed

Waypoint will manage the installation and configuration of the operating system on your server. When coupled with our Waypoint Cloud – Dedicated Server offering this can significantly reduce time to market in deploying new servers into new markets. Waypoint will stay on top of new operating system patches and releases, working with you to ensure these are applied in a timely manner.

Performance Optimized

During onboarding, Waypoint systems experts will work closely with you to understand how your applications work. Waypoint will configure the server and tune its performance and settings to optimize the performance of your trading applications.

Health Monitored

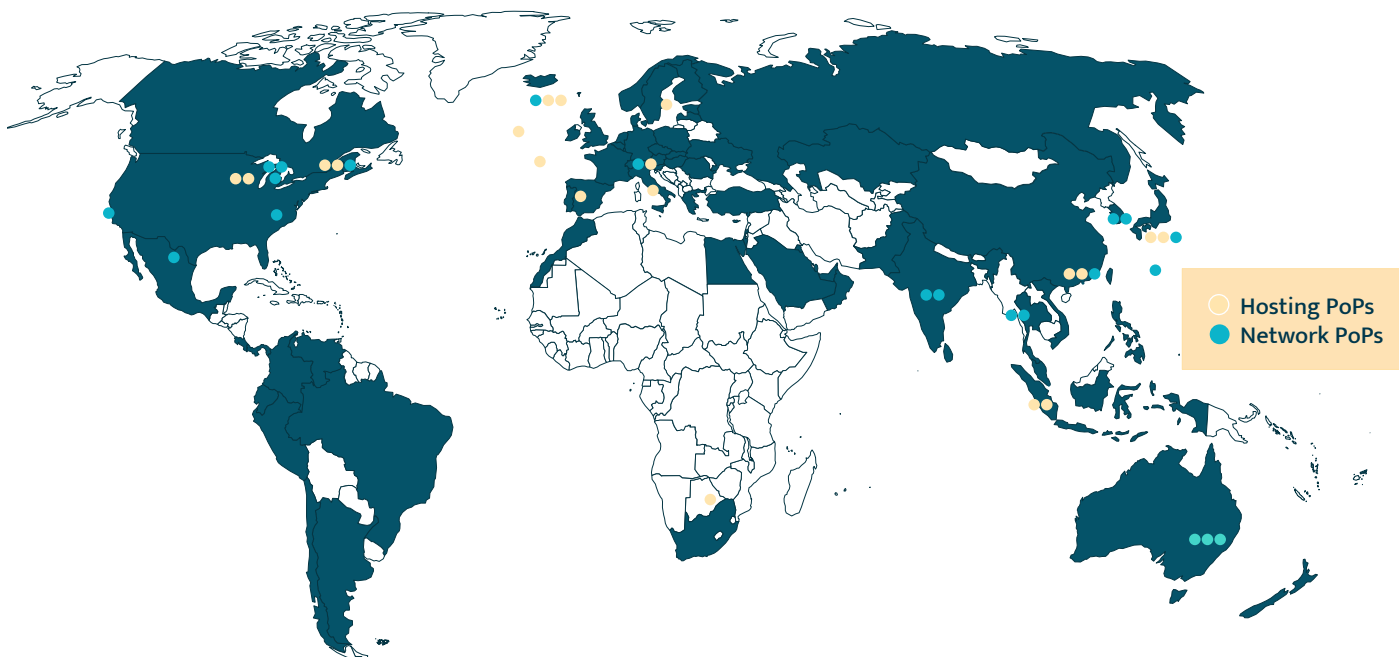

Waypoint will monitor the health of your server and operating system 24x7x365, proactively notifying you about hardware or software issues and working to address them as they occur, minimizing any impact to your trading operations.

Management of trading infrastructure servers can be time-consuming and complex.

Exactly where you need to be.
Navigating complexity with transparency.

WAYPOINT GLOBAL POINTS OF PRESENCE AND CONNECTIVITY

Waypoint will stay on top of new operating system patches and releases, working with you to ensure these are applied in a timely manner.
