

WEB ACCESS CONTROL MANAGER

An industry leading web access and control solution.

Web Access Control Manager (WACM) provides firms with the capability to control individual access to authorized web-delivered market data services, single bank portals and internal portals. WACM delivers security and transparency into usage patterns of services across the enterprise. WACM integrates with Active Directory, and typical security databases such as SAML and Sailpoint, managing user id and passwords in one location.

WACM has a complete audit trail of all login and usage details allowing clients to create more accurate billing, ensure compliance with license limitations, and reduce costs from non-usage. In addition, there is built-in automation which sends email alerts to business analyst teams directly identifying quick cost saving opportunities such as low usage or unused services.

WACM is deployed either on premise, in the client cloud or through West Highland, a TNS company's, cloud/as a service and features:

Single sign-on solution - This is achieved by connecting to the customer's Active Directory and using the same login credentials, with support for two-factor authentication.

Usage tracking for cost savings - Firms rely on vendors to track and report portal/website usage, but these reports are not designed to control or reduce costs. WACM tracks every log-in to highlight when and how often a user logs into the services as well as what the service is being used for.

Features

Completely and securely control and manage access to portals/websites/applications, etc.

Tracks usage/non-usage and notifies admin of under-utilization with automated emails

Single sign-on – eliminates user knowledge of login ID and password

Automatic notifications for cost saving opportunities

Integration with access and identity management systems such as SailPoint

Secure Management Console

Automated password reset policy management

Straight through processing for off-boarding users

Exactly where you need to be.

Navigating complexity with transparency.

Benefits

Helps control cost of web-based services, single bank portals, etc.

Automatically logs into services and adheres to firm and vendor password policies

Enterprise support for complete control via a single solution

Automated reporting and simplified management of services / portals

Helps eliminate compliance violation of credential sharing

Complete audit trail of activities and management changes

Helps reduce financial risk due to non-compliance and maintain reputational integrity

Maintains compliance with vendor license restrictions and SEC Regulation SCI

Boost efficiency as WACM preserves the last screen location of each service
